

#	Product Backlog Item	Priority	Estimate	
1	As a customer, I want to see restaurant details so that I can decide where to order.	High	5	
2	As a customer, I want to complete checkout.	High	13	
3	As a customer, I want the app to be beautiful and easy to use.	High	?	
4	As a restaurant owner, I want to manage my restaurant profile, menu, prices, opening hours, delivery areas, promotions, and photos.	Medium	13	
5	As a customer, I want to pay by card.	High	5	
6	Improve database performance.	Low	3	
7	As a customer, I want to receive an order confirmation after placing an order.	Medium	3	
8	As a customer, I want to place an order.	High	8	
9	Research whether customers prefer dark mode.	Low	2	
10	As a customer, I want to cancel an order.	Low	8	

Trouble Card 1: The Angry Customer	"I don't care how beautiful the application is. I just want to successfully place my order."	8 Value-Focus on the user outcome rather than low-level technical or cosmetic tasks.) 3)What would you change?: As User I want a simple checkout screen so that I can place my order quickly and without confusion Prioritize on usability
Trouble Card 2: The Giant Story	"There is no way we can finish this story during one Sprint."	The Giant Story Find the story that might be causing the problem. As a restaurant owner, I want to manage my restaurant profile, menu, prices, opening hours, delivery areas, promotions, and photos. Which INVEST principle is involved? =Small cause too much tasks for first sprint to complete. Can you split the story? Yes As a restaurant owner, I want to manage my restaurant profile. est:3

		As a restaurant owner, I want to manage my delivery areas and promotions. est: 4 As a restaurant owner, I want to manage my prices, opening hours and photos. est:5
Trouble Card 3: The Mystery 13	"Just start building it. We'll figure it out later."	
Trouble Card 4: Everything Is Urgent	"Everything in the backlog is HIGH priority."	Prioritized 1-High 2-High 3-Medium 5-Medium 8-High
Trouble Card 5: New Information	"Customers are abandoning the ordering process because they don't understand the delivery cost before checkout."	2-High Emergent – knowing delivery cost is important Clarify- Add delivery cost before checkout
Trouble Card 6: "We'll Know When It Looks Good"	"We'll know the story is finished when it looks good."	
Trouble Card 7: The Dependency	"We cannot finish Story B until Story A is completely finished."	1) As a customer, I want to complete checkout. 2 As a customer, I want to pay by card. 5 As a customer, I want to place an order.8 2) yes, independent cus, if there is not a checkout system how can place a order, or pay they are too tangle up. 3)Could the stories be changed or split?

		stories can be split, then when user wants to place order they can choose to pay with cash(which will direct to build one), for the checkout form cash can be done later, and placing order falls in between those.
Trouble Card 8: Too Much Too Soon	You discover that a low-priority item has: • detailed UI designs • detailed technical specifications • many acceptance criteria • several pages of documentation The team probably will not work on this item for several Sprints.	

Problem	DEEP / INVEST	Why is it a problem?	What did we change?
1. Trouble Card 1 (The Angry Customer)	INVEST - Valuable	The original story focused on cosmetics and aesthetics ("beautiful app"), which does not focus on the actual user outcome of placing an order.	We prioritized usability and rewrote the story: <i>"As a User I want a simple checkout screen so that I can place my order quickly and without confusion."</i>
2. Trouble Card 2 (The Giant Story)	INVEST - Small	The restaurant management story is way too big. There are too many tasks (menu, prices, photos, areas) for the team to complete in the first Sprint.	We split it into three smaller stories: 1. Manage profile (Est: 3) 2. Manage delivery areas & promotions (Est: 4) 3. Manage prices, hours, & photos (Est: 5)
3. Trouble Card 4	DEEP - Prioritized	If everything is marked "High" priority, then nothing is truly a priority, making it impossible for the team to know what to	We reordered the priorities. We kept the core ordering features (Items 1, 2, and 8) as High priority, but moved Items 3 and 5 down to Medium priority.

Problem	DEEP / INVEST	Why is it a problem?	What did we change?
(Everything Is Urgent)		pull into the Sprint first.	
4. Trouble Card 5 (New Information)	DEEP - Emergent	New research shows users are abandoning carts because they can't see the delivery cost. The backlog must adapt to this new information.	We clarified the backlog by adding a specific requirement to show the delivery cost to the customer <i>before</i> the checkout process begins.
5. Trouble Card 7 (The Dependency)	INVEST - Independent	Items 2 (Checkout), 5 (Pay by card), and 8 (Place order) are too tangled up. You cannot pay or place an order if the checkout system isn't built yet.	We split and restructured the stories: We will build a basic checkout flow using cash first (so it can be tested independently). Paying by card becomes a separate story to be done later.
